

PAT-NO: JP404222265A
DOCUMENT- JP 04222265 A
IDENTIFIER:
TITLE: PRODUCTION OF BULKY NONWOVEN FABRIC
SHEET

Abstract Text - FPAR (1):

PURPOSE: To obtain a bulky nonwoven fabric sheet, rich in softness and excellent in strength and elongation.

Abstract Text - FPAR (2):

CONSTITUTION: A bulky nonwoven fabric sheet is obtained by a production method for forming holes with hot needles, having 0.05-5 mm diameter and heated at a higher temperature than the melting point of a filament nonwoven fabric, containing thermoplastic fiber such as polypropylene and prepared by a spunbonding method at 0.2-20% (ratio of hole area/surface area of the nonwoven fabric) and then stretching the nonwoven fabric after forming the holes under a stress of 50-95% based on breaking stress of the nonwoven fabric.

Title of Patent Publication - TTL (1):

PRODUCTION OF BULKY NONWOVEN FABRIC SHEET

Inventor Name (Derived) - INZZ (1):

HAYASHI, KUNIIHIKO
